NFT Transfer Guide

ENG

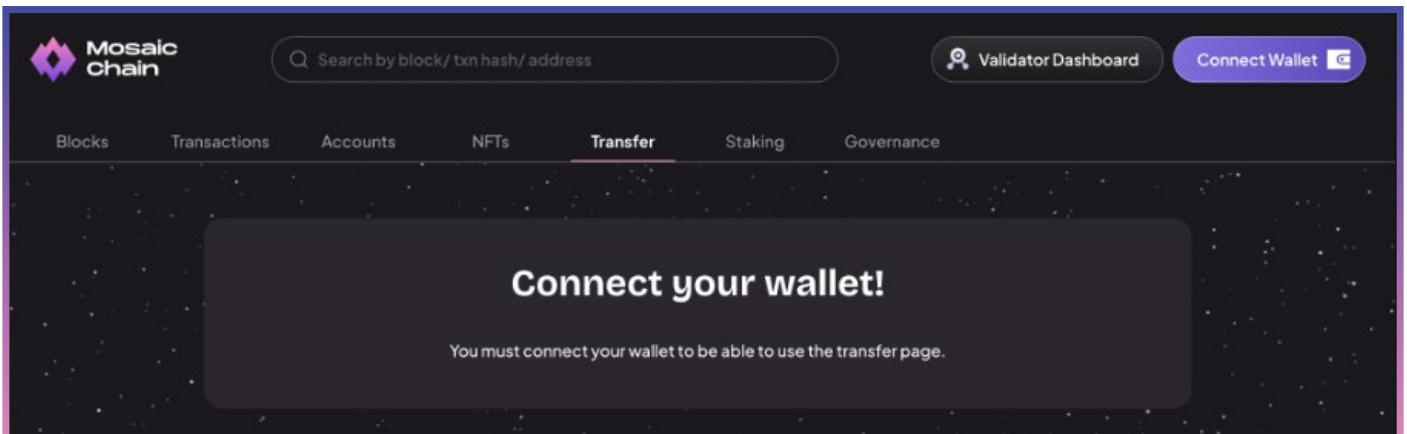

NFT Transfer

This guide provides assistance for transferring NFTs (i.e., NFT transfers) on the Mosaic Explorer interface.

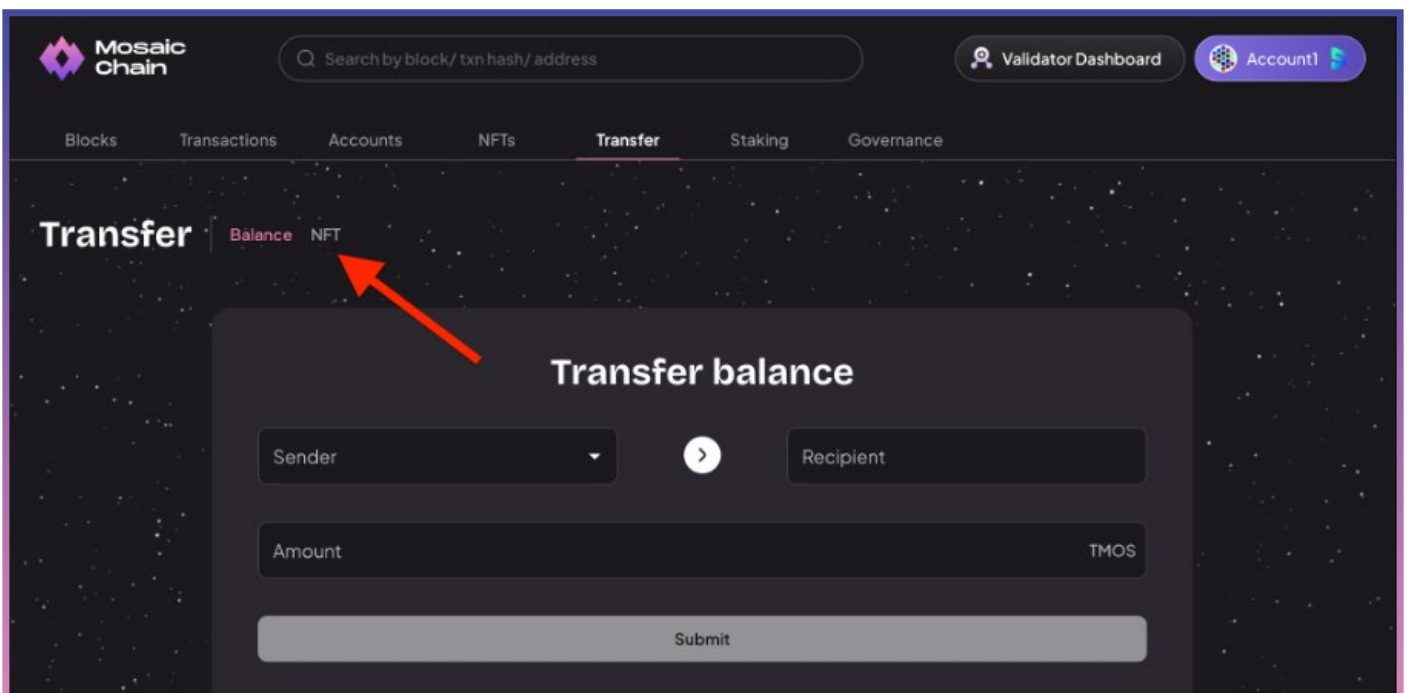

In order for an NFT to be freely transferable, it must be in an “unbound” state. A bound Delegator NFT can be set to “unbound” status by unstaking, while a bound Validator NFT can be set to “unbound” using the Unbind Validator function.

Warning! NFT transfers are irreversible! If you transfer an NFT from your account, you will no longer have access to it.

1. In Mosaic Explorer (mainnet-explorer.mosaicchain.io), open the Transfer page. If you haven't connected your wallet yet, click the “Connect Wallet” button in the top right corner and connect any of your accounts. You'll have the option to choose a different one during the transfer process.

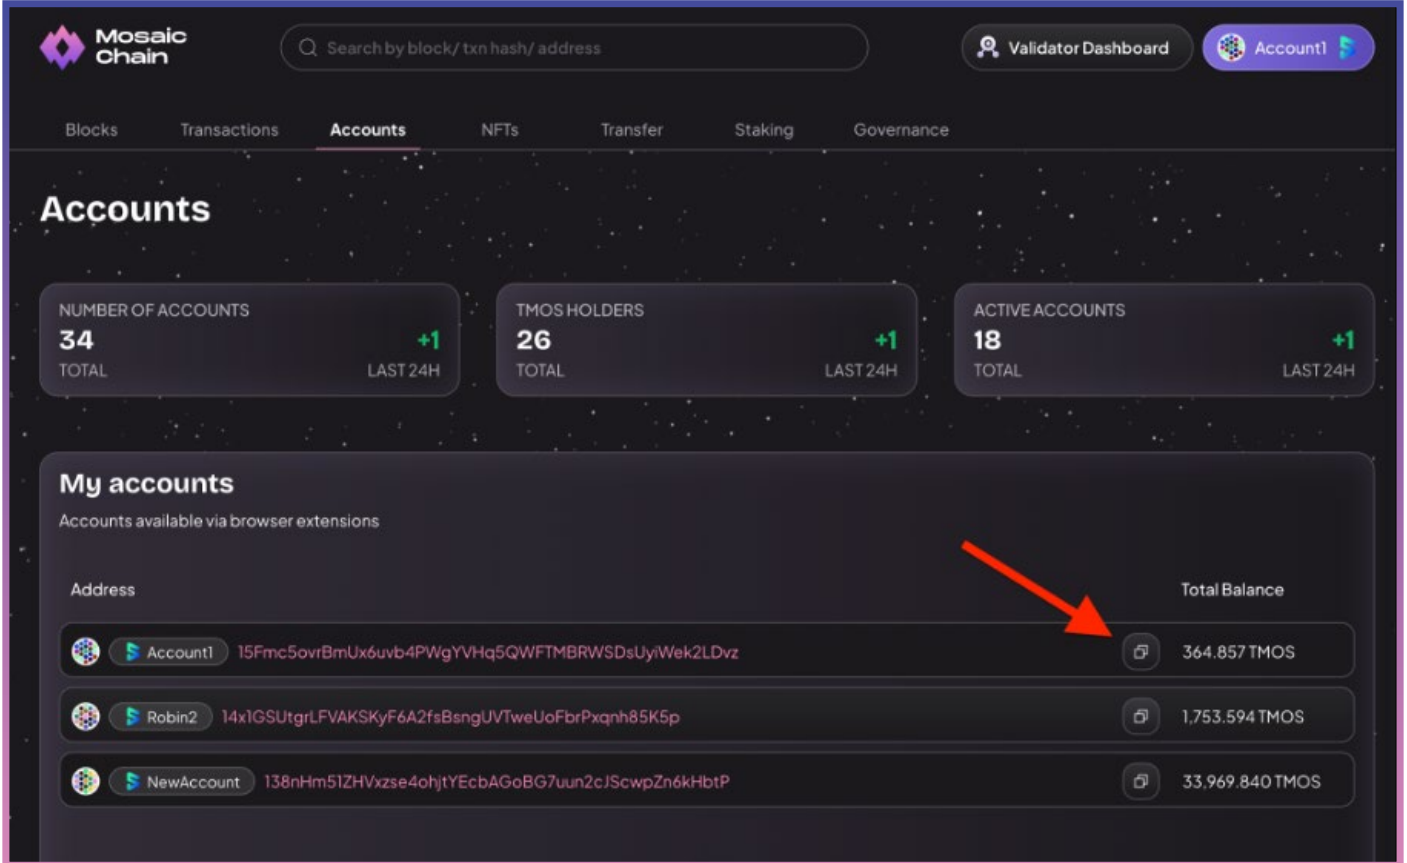

2. On the Transfer page, select the NFT menu point from the two options next to the title.

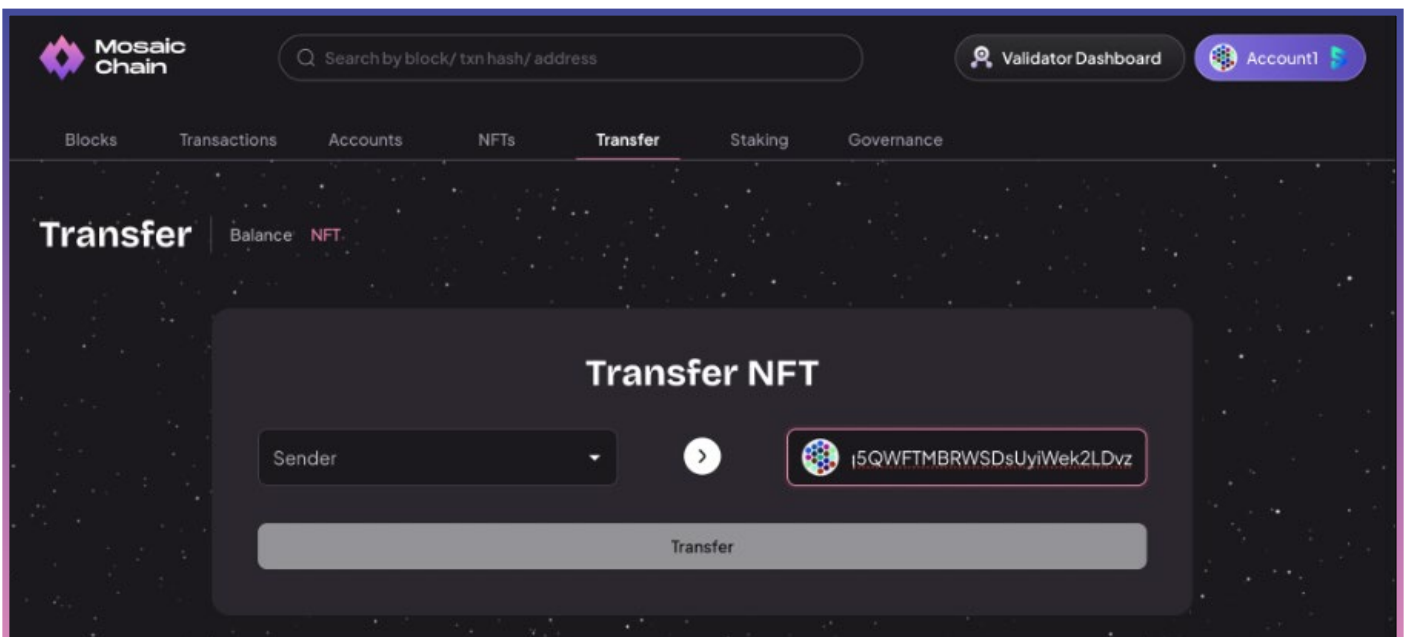

3. In the Transfer NFT form, you can select the sender from your connected accounts, while the recipient (Destination) must be typed in or pasted.

You can copy the destination account address from the Accounts page. For your own account, you will find it in the My Accounts list. Click the copy button next to the account address to copy it to the clipboard. Then, on the Transfer NFT page, paste it into the “Destination” field using Ctrl+V.

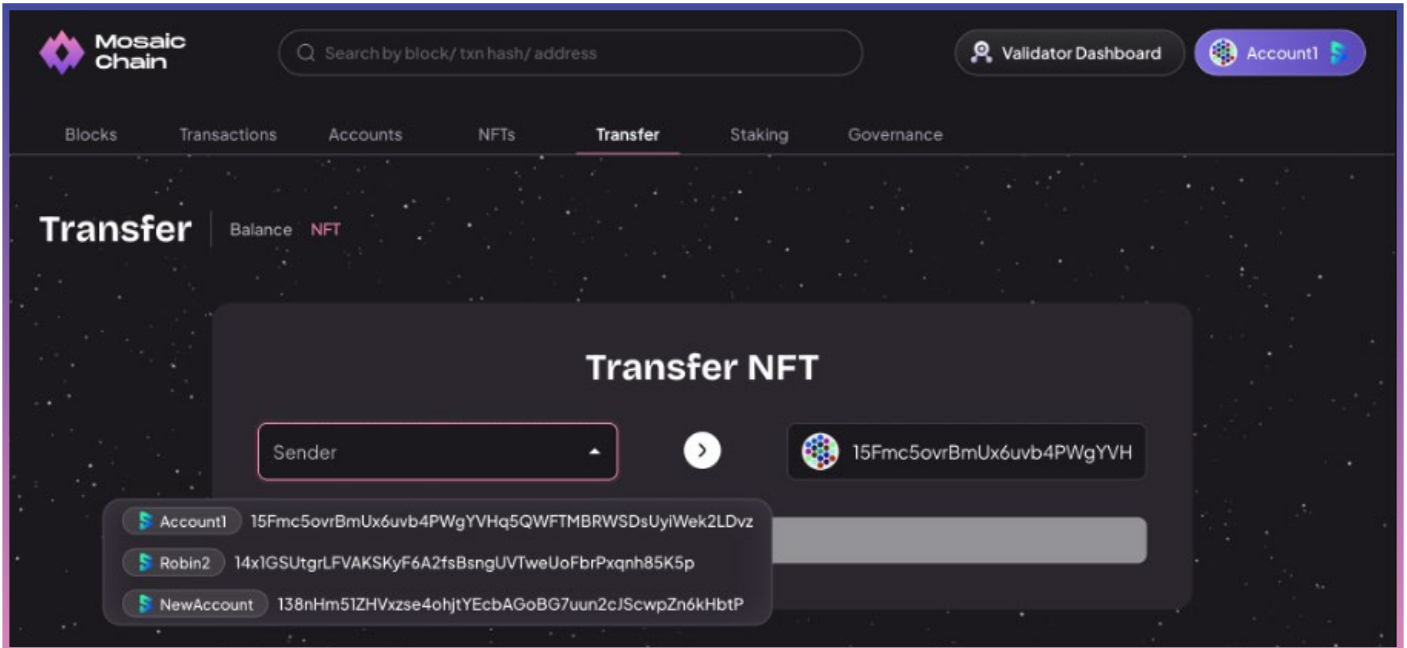

The screenshot shows the 'Accounts' section of the Mosaic Chain interface. At the top, there is a search bar and navigation links for 'Validator Dashboard' and 'Account1'. Below the navigation menu, three summary cards are displayed: 'NUMBER OF ACCOUNTS' (34 TOTAL, +1 LAST 24H), 'TMOS HOLDERS' (26 TOTAL, +1 LAST 24H), and 'ACTIVE ACCOUNTS' (18 TOTAL, +1 LAST 24H). The main section is titled 'My accounts' and lists three accounts with their addresses and total balances. An orange arrow points to the copy icon next to the 'Account1' address.

Address	Total Balance
Account1 15Fmc5ovrBmUx6uvb4PWgYVHq5QWFTMBRWSDsUyiWek2LDvz	364.857 TMOS
Robin2 14x1GSUtgrLpVAKSKyF6A2fsBsngUVTweUoFbrPxqnh85K5p	1,753.594 TMOS
NewAccount 138nHm51ZHVzse4ohjtYEcbAGoBG7uun2cJScwpZn6kHbtP	33,969.840 TMOS

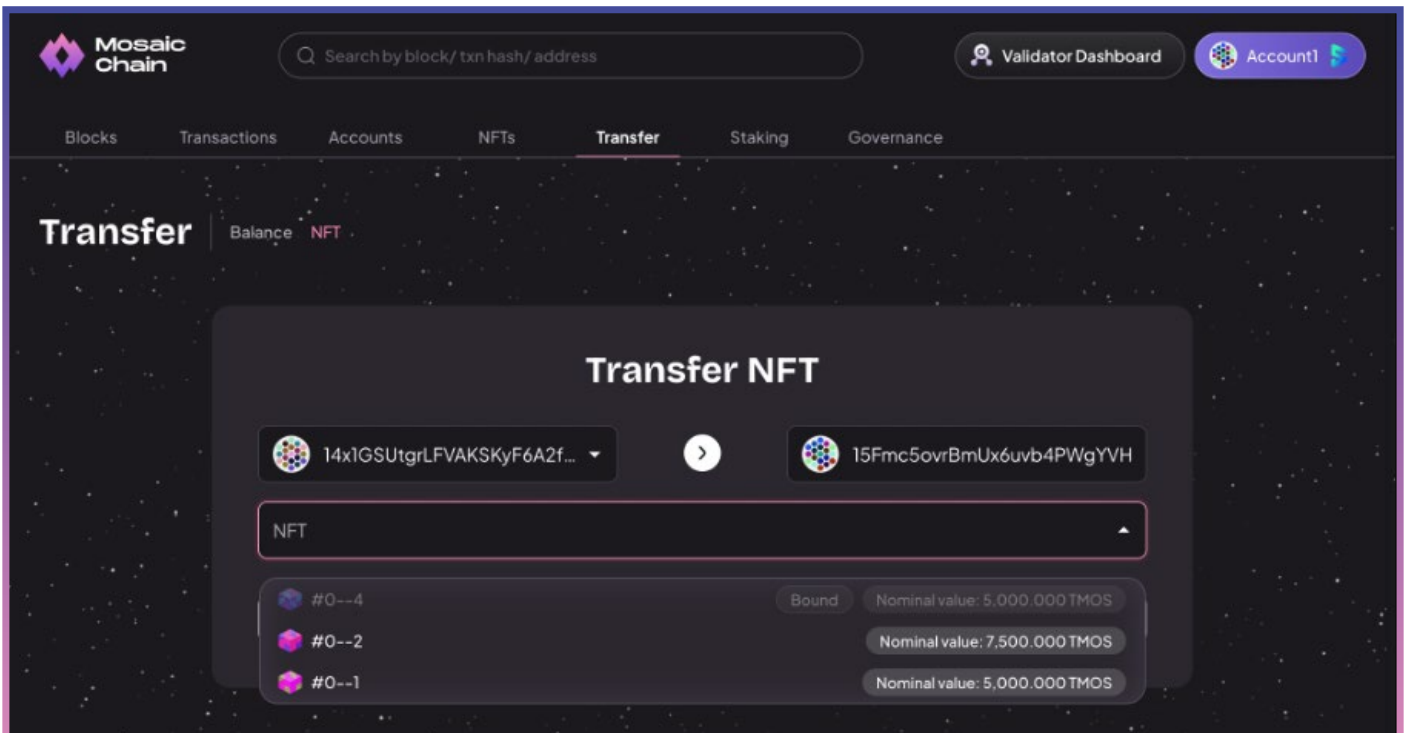

The screenshot shows the 'Transfer NFT' form in the Mosaic Chain interface. The 'Transfer' tab is selected, and the 'Balance' is set to 'NFT'. The form includes a 'Sender' dropdown menu, a right-pointing arrow, and a destination address field containing 'i5QWFTMBRWSDsUyiWek2LDvz'. A 'Transfer' button is located at the bottom of the form.

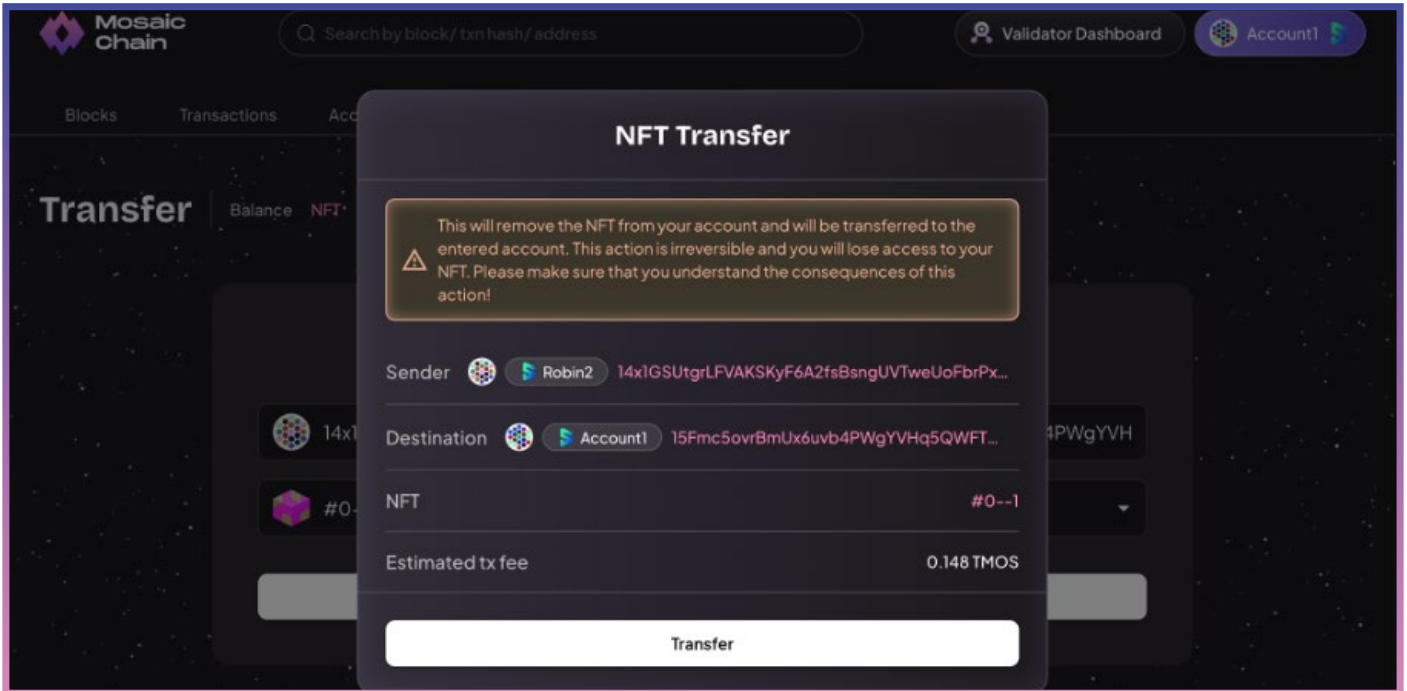

4. Select the sender account address—the one you want to transfer the NFT from—using the “Sender” dropdown menu. Click on the appropriate account address.

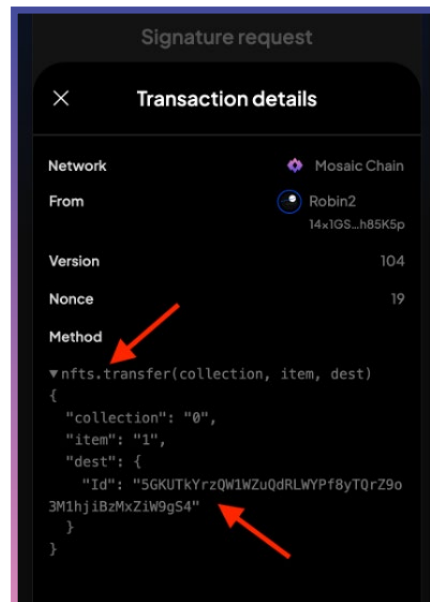

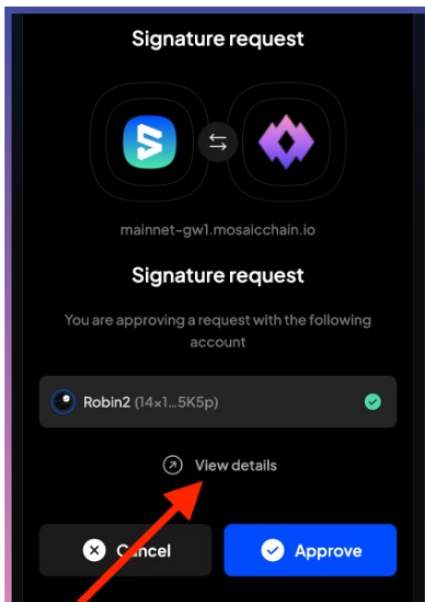

5. The NFTs in the selected account will appear when you click on the lower “NFT” field. NFTs in a “bound” state cannot be selected. Click on the NFT you want to transfer from your account, then click the Transfer button.

6. After signing the transaction, the process becomes irreversible, so make sure to verify all details. If everything is correct, click the Transfer button.

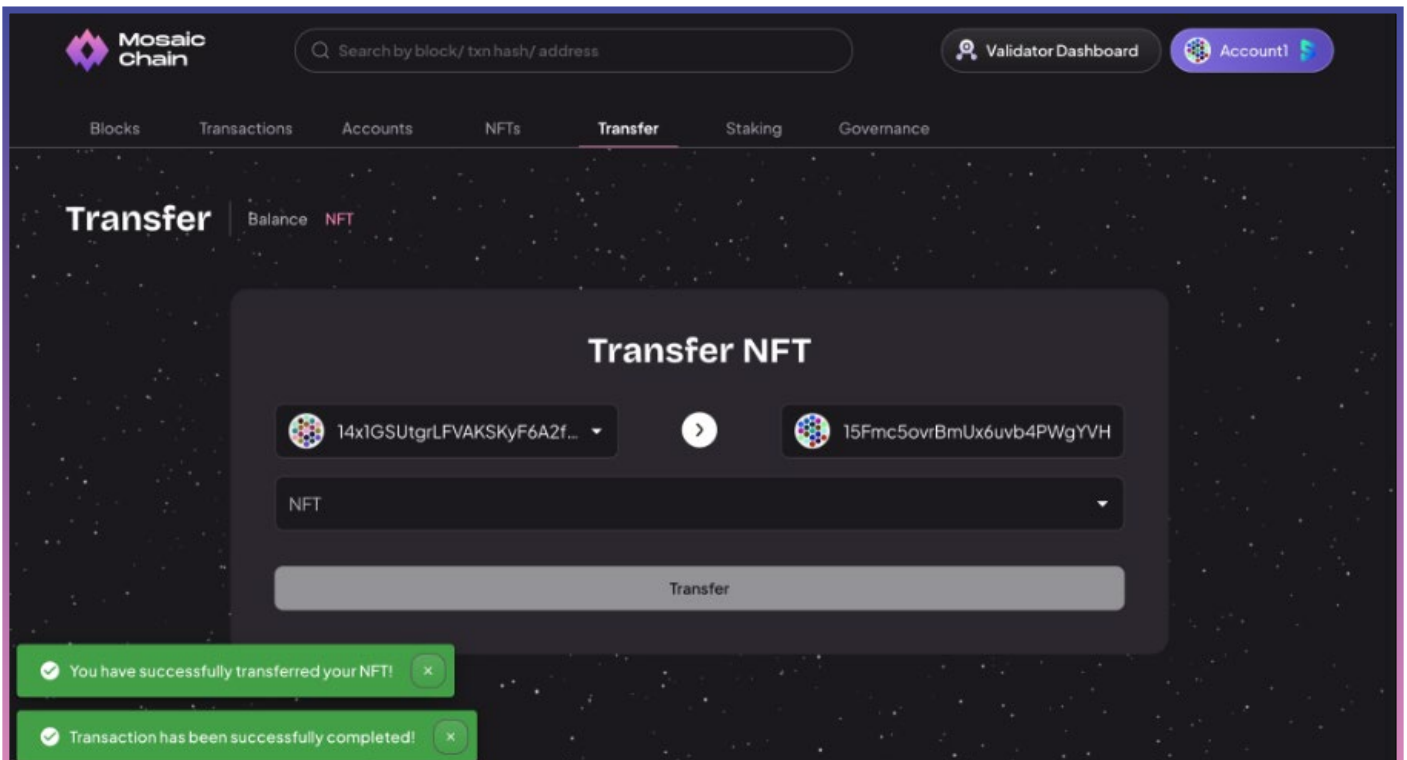

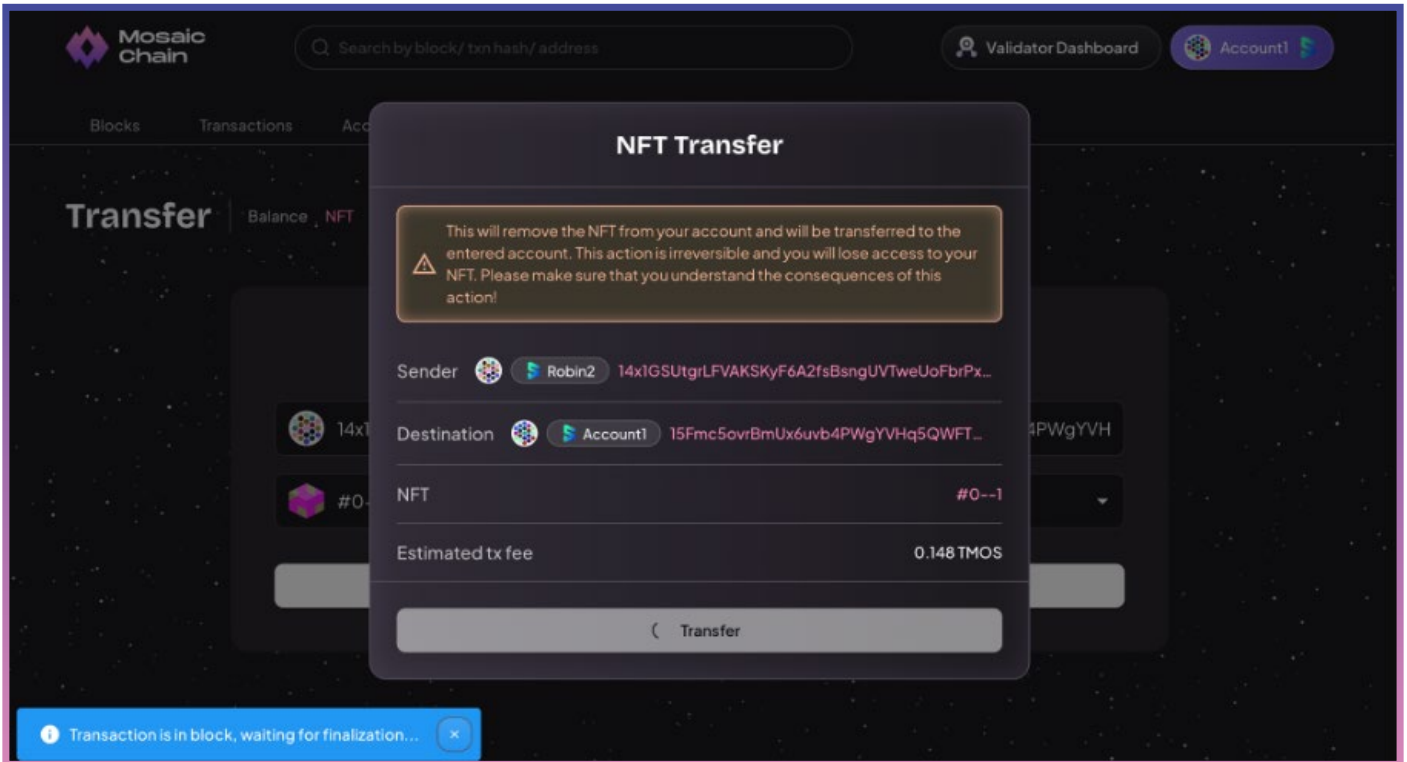

7. The wallet provider's (SubWallet) window will appear. Enter your password if required, then review the transaction details by clicking "view details" and then the "nfts.transfer" text.

It is important to note that some versions of SubWallet display account addresses in a format starting with 5. To verify that this is indeed the correct destination address, you can use the ss58.org website—most easily by pasting the original account address.

If everything looks correct, close the details window using the X in the top left corner, then click the Approve button.

8. The transaction has now been sent to the blockchain. You can track its status in the information bars appearing in the bottom left corner of the Explorer.

9. Once the transaction is successfully completed, the NFT will be transferred from one account to the other. You can verify this on the Account Details page of the respective accounts, under the NFTs tab.
