Mosaic Chain

WHITEPAPER · TOKEN MODEL

MLP Tokenomics

The final token model for the Mosaic Launchpad: a single fixed supply, its allocation pockets, the opening market, and the unlock schedule.

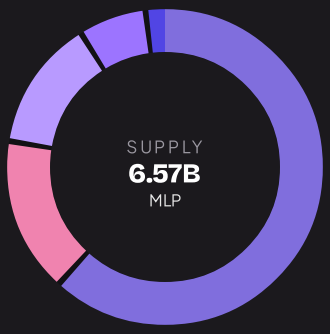

Issuer: Bridge Digital d.o.o. Banja Luka, operator of Mosaic Launchpad

Summary

The total MLP supply is **6,569,772,781**, minted in full at the TGE with no further emission. The model has five allocation pockets. All figures are the scaled values (30×) so that HAI converts one to one into MLP.

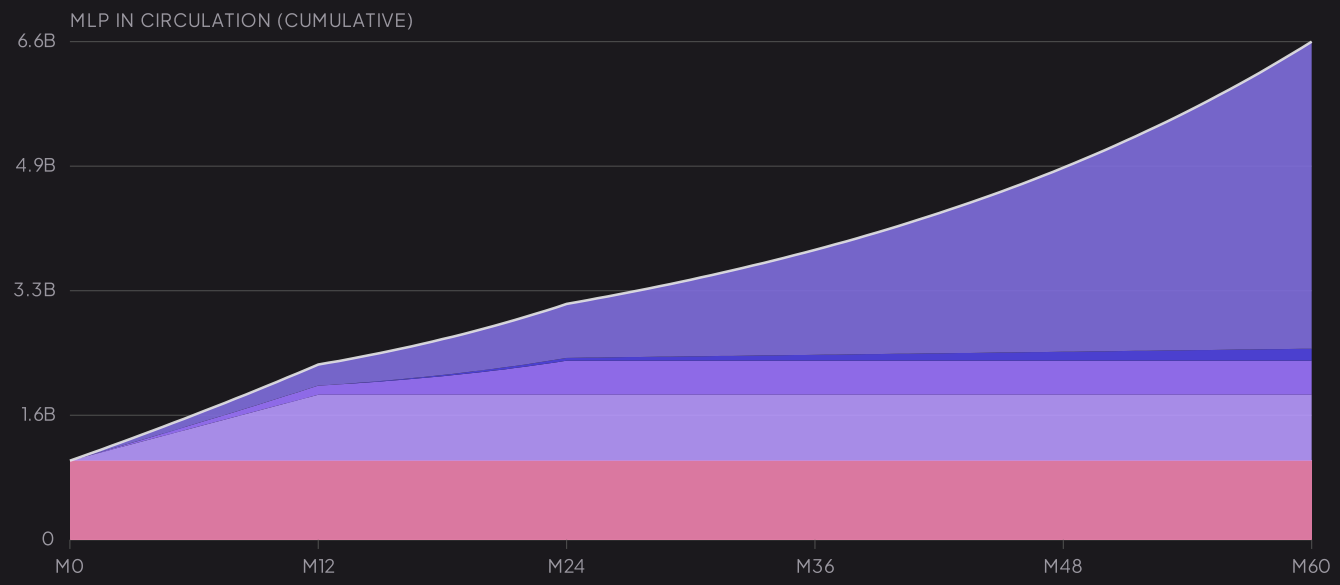

Total supply	6,569,772,781 MLP, minted at the TGE
Opening price	1 MLP = 1/3,000 USDC (0.000333 USDC)
Initial pool TVL	~694,898 USD at launch
Initial FDV	~2,189,921 USD at launch

MLP allocation by pocket (6,569,772,781 MLP).

Allocation	MLP	Share
Early Investors	4,049,596,960	61.64%
Liquidity Pool	1,042,347,000	15.87%
Ecosystem Funds	870,000,000	13.24%
Marketing	450,000,000	6.85%
HAI Migration	157,828,821	2.40%

Unlock schedule

Indicative cumulative MLP entering circulation over the first 60 months (Month 0 = TGE). Bands stack to the fixed total of 6,569,772,781 MLP; the exact per-holder progressive curves are modelled and may be refined.

Allocation	Release window	Shape
Early Investors	Months 1–60	Progressive (exponential), per holder
Liquidity Pool	Month 0 pool; owner vesting Months 7–60	Pro rata to 20% of package value
Ecosystem Funds	Months 1–12	Linear, 72,500,000 MLP / month
Marketing	Months 1–24	Progressive
HAI Migration	Months 13–60	After 1:1 swap on the Weboffice

Opening market

Pair and pool

The market pair is MLP / USDC. The initial pool is seeded with 1,042,347,000 MLP and 347,449 USDC, for an opening price of 1 MLP = 1/3,000 USDC. Liquidity added at Month 0 does not count as new MLP emission.

Utility

MLP underpins access to platform tiers. On-chain governance is not enabled at launch.

Claiming

Early Investors claim their MLP on the Weboffice. Unclaimed entitlement never expires, and tokens are freely transferable once claimed.

HAI migration

HAI converts to MLP at a user-driven 1:1 rate on the Weboffice, and the HAI is burned. Because the supply is scaled 30×, the HAI figures are directly convertible MLP amounts.

Model principles

- **Operations first.** The Marketing and Ecosystem pockets unlock earliest so platform operations stay funded; both funds are drawn only when needed.
- **No separate team pocket.** There is no distinct Team or Advisors allocation; team and infrastructure costs are met from the Ecosystem Funds pocket.

Pools, pool shares and the treasury are managed by an operator appointed by Bridge Digital d.o.o. These figures are the final token model for the Mosaic Launchpad. This page is informational and is not financial advice, an offer, or a solicitation. Token unlock mechanics are forward-looking and may be refined.
